

Kirschner Brush Manufacturing, now a Preferred Supplier to Defense Contractors

Kirschner Brush now supplies paint brushes used in the manufacturing and maintenance of US submarines, naval ships, airplane hangars, and general military construction. Ever since receiving its CCR (Central Contractor Registration) with the Department of Defense and becoming an approved GSA supplier, orders have come in for B.A.E. Systems, General Dynamics, and numerous other defense contractors. *“It gives me special satisfaction when I ship an order to the U.S.S Ronald Reagan and proud to know that we are manufacturing these products right here in the Bronx, NY, keeping local workers busy”* says Israel Kirschner.

Kirschner Brush supplies the military a variety of paint brushes at reasonable prices. The typical applications are:

Radiator Brushes: With a long, curved handle – from thirteen to sixteen inches in length – the Radiator Brush is designed to fit into hard-to-reach areas. This is an essential tool when working with piping, steel or bridging and construction.

Sash Brushes: Sashes are smaller brushes, especially equipped with long handles for painting corners or narrow areas like window sills, door frames, chairs, metal furniture, screens and small pipes. They are available in round, flat and angular shapes.

Fitch Brushes: These slender brushes are excellent for coating chairs, ladders, metal furniture, radiators, scrollwork, small pipe trellises, windows, and for touching up other narrow areas.

Arming the Military with Paint Brushes from the Bronx, Kirschner has highly skilled workers making all of its brush products – paint brushes, varnish brushes, chip brushes and more. Each brush is customized and shampooed individually. For more information, please see www.kirschnerbrush.com.
